

Information Builders enables agile information solutions with business intelligence (BI) and integration technologies. Flexible, scalable, and secure, WebFOCUS – the most widely utilized BI platform – permeates every level of the extended enterprise through a simple and intuitive user experience.

This operational scorecard shows administrative metrics, across clinical lines of service, with the ability drill-through to more detailed information.

Solutions in Healthcare

Executive Overview

In a market that is both competitive and heavily regulated, healthcare providers are challenged to improve quality of care and customer satisfaction, while lowering costs and increasing revenues. Information Builders helps customers achieve these goals with tools and solutions for performance management (PM), enterprise business intelligence (BI) and reporting, and integration.

Our **Performance Management Solutions for Healthcare** enable providers to define business strategies, articulate them as key performance indicators (KPIs) and performance measures, tie those metrics and indicators back to their source systems, and then communicate the results in secure, role-based dashboards and scorecards. Out of the box, our Performance Management Framework (PMF) for Healthcare helps providers comply with quality-of-care pay-for-performance programs, and deliver financial, clinical, administrative, and operational measures across their organizations.

Everyone makes decisions. WebFOCUS, our Gartner-recognized, industry-leading BI platform provides everyone within healthcare organizations with all the data they need, in a format they can use, to make decisions. Executives and board members need to see high-level summary information with the ability to drill down into details. Service line managers and workers, administrators, clinicians, and providers, all need timely operational reporting

environments to do their jobs. Financial, marketing, quality, and research analysts need to be able to slice and dice data to understand what has happened, and to help plan for the future. WebFOCUS provides a single enterprise reporting platform spanning all these users' requirements.

Everything should work together. Finally, there are myriads of internal and external integration efforts underway. Providers, payers, and public health organizations are all expanding the ways and reasons they share data with each other. Hospitals, labs, clinics, and pharmacies are all sharing data with e-business rules and formats such as **HIPAA** and **HL7**. Our iWay Software suite of pre-built components provides codeless integration – enabling healthcare organizations to integrate all their legacy, homegrown, and packaged financial, clinical, administrative, and operational systems.

Solutions In Action

NYU Medical Center deployed a Labor Productivity Management System that empowered hospital department managers to measure and monitor labor utilization while controlling associated costs quickly and easily. The system also identified opportunities for more accurate patient billing, and a favorable labor budget, while instilling a culture of accountability throughout the organization.

Jefferson Regional Medical Center deployed an operational business intelligence solution, which became an integral part of the hospital's daily management activities – boosting staff productivity, improving physician deficiency rates, and cutting costs throughout the facility.

MedStar Health improved patient care by providing fast, simple, and intuitive access to administrative and clinical information for doctors, nurses, executives, and financial analysts.

Medical Associates Health Centers enhanced efficiency of information access and reporting on EMR, clinical data, complex billing systems while enforcing HIPAA guidelines and HL7 standards. This enabled them to achieve their ultimate goal of improved patient care.

Netherlands-based **Plexus Medical Group** has created a nationwide system that delivers information about costs, reimbursements, treatment success rates, and many other KPIs. The BI solution, called Pi, helps providers analyze the quality and efficiency of their primary processes, then compares these results to national benchmarks. Hospitals using Pi may have cost reductions of up to 10 percent of their annual budgets, thanks to insight derived from the system.
